- MongoDB (4 years), Postgresql (6 years)
- PHP (6 years), Node.js (10 years), C# (2 years), Rust (3 years)
- Front End Javascript (13 years)

Career History

Breezy HR 03/2022 - 09/2026 Full Stack Software Engineer

- Worked on a team doing weekly deploys to keep our product stable, up to date with security concerns, error free for clients, and product improvements
- Working on a team using microservices to develop a SaaS with thousands of users using the app daily. I was responsible for closing bugs and developing new features for customers.
- Accelerated bug resolution and development velocity by integrating AI-assisted workflows (Cursor/Claude) into daily production tasks.
- Full stack SaaS development written in Angular js, Vue.js, and React using Node.js and MongoDB on the backend orchestrated on AWS.

Cottingham & Butler 09/2019 – 03/2022 Software Engineer II

- Developed and improved multiple internal and external projects
- Responded to internal support tickets on any of the internal and external applications I was responsible for.
- AWS Migration - I migrated our external-facing web apps to AWS from a hosted-solution. This allowed the company to save money, give us better insights into our code, and better tune our platform for our client's use.

Great Scott Design 07/2018 – 06/2019 Full Stack Developer

The Hauser Design Group, 03/2013 – 07/2018 Full Stack Web Developer
